

# Test with Pandoc using Github Actions

## Hello

This repository is an example on how to use a Github Action.

It has a Markdown file and using a Github Action uses Pandoc to generate HTML, PDF, etc. and pushes the generated files into another Github repo.

Now it has stricter shell options.

And now... names in entrypoint.sh and names in action.yml are aligned.

Testing now with the COMMIT\_MESSAGE (default)

Now testing with `-set-upstream`

Now testing after <https://github.com/cpina/github-action-push-to-another-repository/pull/41>

Now testing after adding support for github hosts other than github.com (again, 2, 3)

Testing that the check for a branch works... if it exist

Testing after a small change in main (GitHub repository username)

This one comes from the deploy keys

And another one from the deploy keys repo

SSH\_DEPLOY\_KEY updated (now without a new line at the end) Now using the correct deploy key

Testing on 14th July 2022 (2)
