

# Test with Pandoc using Github Actions

## Hello

This repository is an example on how to use a Github Action.

It has a Markdown file and using a Github Action uses Pandoc to generate HTML, PDF, etc. and pushes the generated files into another Github repo.

Now it has stricter shell options.

And now... names in entrypoint.sh and names in action.yml are aligned.

Testing now with the COMMIT\_MESSAGE (default)

Now testing with `-set-upstream`

Now testing after <https://github.com/cpina/github-action-push-to-another-repository/pull/41>

Now testing after adding support for github hosts other than github.com (again, 2, 3)

Testing that the check for a branch works... if it exist

Testing after a small change in main (GitHub repository username)

Another test just in case

Another test with the right branch.

Fix / else / then is tested

Testing on 20th of February 2023

Testing on 16th March 2023

Testing on 30th April 2023

Testing on 19th May 2023
